AllySphere: An Alumni Associate Platform (Web)

Name of Students - Amisha Paliye, Suniya Firdous Khan, Rashida Qaiyumi, Madiha Sheikh, Tasmiya Siddiquei

Name of Mentor- Prof. Afshan Jabeen Khan

ABSTRACT - AllySphere is an intelligent alumni association platform designed to strengthen connections between students, alumni, and faculty through a centralized digital ecosystem. It enables networking, mentorship, career opportunities, and alumni engagement using features like profile management, communication tools, and event coordination. Powered by modern technologies and an AI-driven recommendation engine, it offers personalized mentor matching and professional connections. Overall, AllySphere provides a scalable and efficient solution for enhancing collaboration and long-term institutional growth.

INTRODUCTION:

In today's digital era, maintaining strong alumni connections is essential for institutional growth, mentorship, and career development. However, many institutions still rely on fragmented systems like social media and spreadsheets, leading to poor data management, limited interaction, and ineffective communication between students, alumni, and faculty.

AllySphere is an intelligent alumni platform designed to create a centralized ecosystem for networking, mentorship, and collaboration. It allows users to manage profiles, access opportunities, and connect through structured programs, while using AI (Gemini 3 Flash) to provide personalized mentor and career recommendations. Built with modern technologies, AllySphere ensures scalability, security, and efficiency.

With features like messaging, forums, analytics, and gamification, it enhances engagement and supports long-term institutional growth by fostering continuous collaboration and knowledge sharing.

AllySphere Development Methodology

WORKING:

The AllySphere platform works by allowing users—students, alumni, and administrators—to register and access personalized dashboards through secure authentication. Once logged in, users can explore events, connect with others, and request mentorship. The AI system analyzes user profiles, skills, and interests to recommend suitable mentors, events, and opportunities, enabling meaningful engagement within the platform. On the backend, the system manages data processing, storage, and communication between modules like mentorship, events, and analytics. Administrators monitor activities through dashboards, while security features such as encryption and authentication ensure data safety. The platform operates smoothly with cloud support, providing a scalable and reliable environment for user interaction.

DASHBOARD:

CONCLUSION:

1. Centralized Platform: AllySphere successfully creates a unified, secure, and intelligent system that solves issues like fragmented communication and unstructured alumni data.
2. Enhanced Connectivity: It connects students, alumni, and faculty on one platform, enabling smooth communication and collaboration.
3. Key Features: Mentorship programs, job postings, events, and
4. AI Integration: The AI-powered recommendation system provides personalized mentor suggestions.
5. Strong Technical Foundation: Built using React, Supabase.
6. Security & Reliability: Features like authentication, role-based
7. Institutional Impact: Improves alumni engagement, supports discussion forums support academic and professional growth.
